Brickability Brick & Building Materials brings together businesses from across the UK, each with their own expertise and varied experience, to offer our customers the complete solution.

More than a leading brick supplier, we offer a wide range of high-quality building products and through our great relationships with clients and suppliers alike, we pride ourselves on being able to meet any project demand, no matter its scope or scale.

Brickability Brick & Building Materials is part of **Brickability Group Plc**, an organisation that brings together over 35 brands across four divisions. As well as the Brick & Building Materials Division, the Group includes the Importing Division, Distribution Division and Contracting Services. Being part of this Group allows us to offer customers an even wider range of products and services.

Furthermore, **Brickability Group Plc** understands the importance of operating a business in a way that cares for both people and the environment. In March 2023, we launched 'Together for the Future', our Environmental, Social and Governance (ESG) strategy that sets out our roadmap for the next decade.

Facing Bricks

As leading facing brick suppliers to the construction market, we provide expert advice, trusted guidance and, most importantly, a vast choice for our customers.

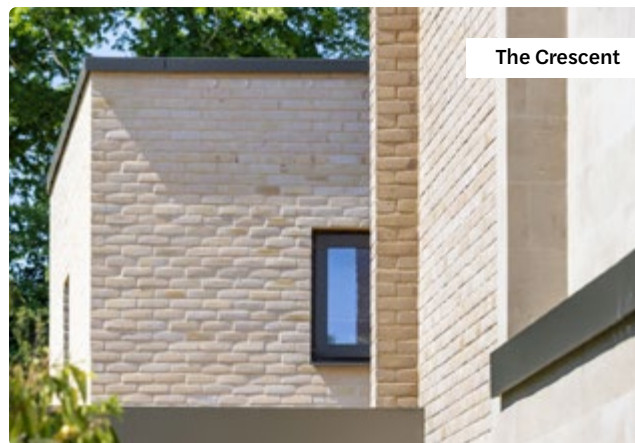

Our extensive range of clay bricks features a wide variety of colours, textures and finishes to suit all project styles and specifications.

Made from entirely natural materials, clay bricks offer exceptional durability and have stood the test of time for centuries. Today, designers and specifiers are exploring bold new applications, from projecting brickwork to creative bond patterns, to deliver standout facades.

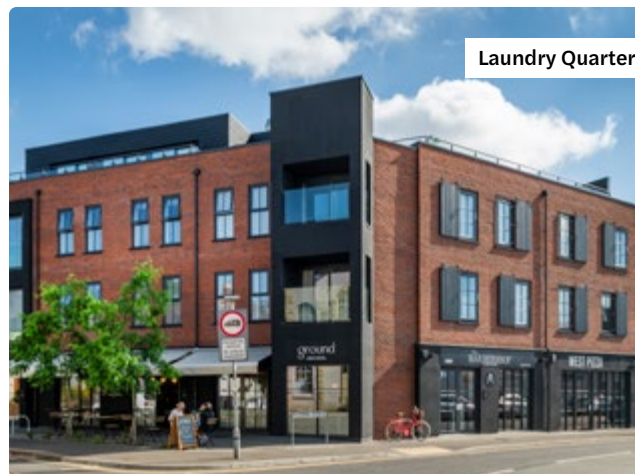

Modern fired clay bricks are produced using one of four processes: soft mud (stock), dry press (handmade), extrusion (wirecut), or waterstruck. Each technique imparts its own distinctive character, affecting the brick's size, shape, colour, and surface texture.

Whether you're working within strict planning and budget requirements or looking to push the boundaries of design, our clay brick range, spanning from standard reds and buffs to eye-catching linear and glazed options, has a solution to meet your needs.

We can also offer a range of cutting options to create bespoke products for unique facades.

Exclusive Brick Range

Coming from leading manufacturers, our exclusive bricks are available in a range of colours and finishes, including textured red multis, rustic linear bricks, natural stone bricks and a selection of glazed options.

Exclusivity means we can offer these bricks at a competitive price point while we get them to your site efficiently, due to reduced lead times and excellent stock availability.

The Exclusive Brick Range focusses on premium aesthetics and exceptional quality, and we're pleased to have supplied these products to help create several standout projects across the country.

Linear Brick Range

Linear bricks, which are also commonly referred to as long format or roman bricks, are a striking specification choice for any project design.

Taking the durable benefits of clay, a linear brick can dramatically change the appearance of a building by accentuating crisp, horizontal lines or embracing a rustic, handmade effect.

Available in a wide range of sizes, plus numerous colours and finishes, this exciting product is fast becoming one of the more popular choices in contemporary architecture.

See more about
Linear Brick Range.

Click 

Glazed Brick Range

Create exciting elevations using our newly expanded glazed brick range. From subtle hues across entire facades, to striking pops of colour on feature walls, glazed bricks can transform the look of a building.

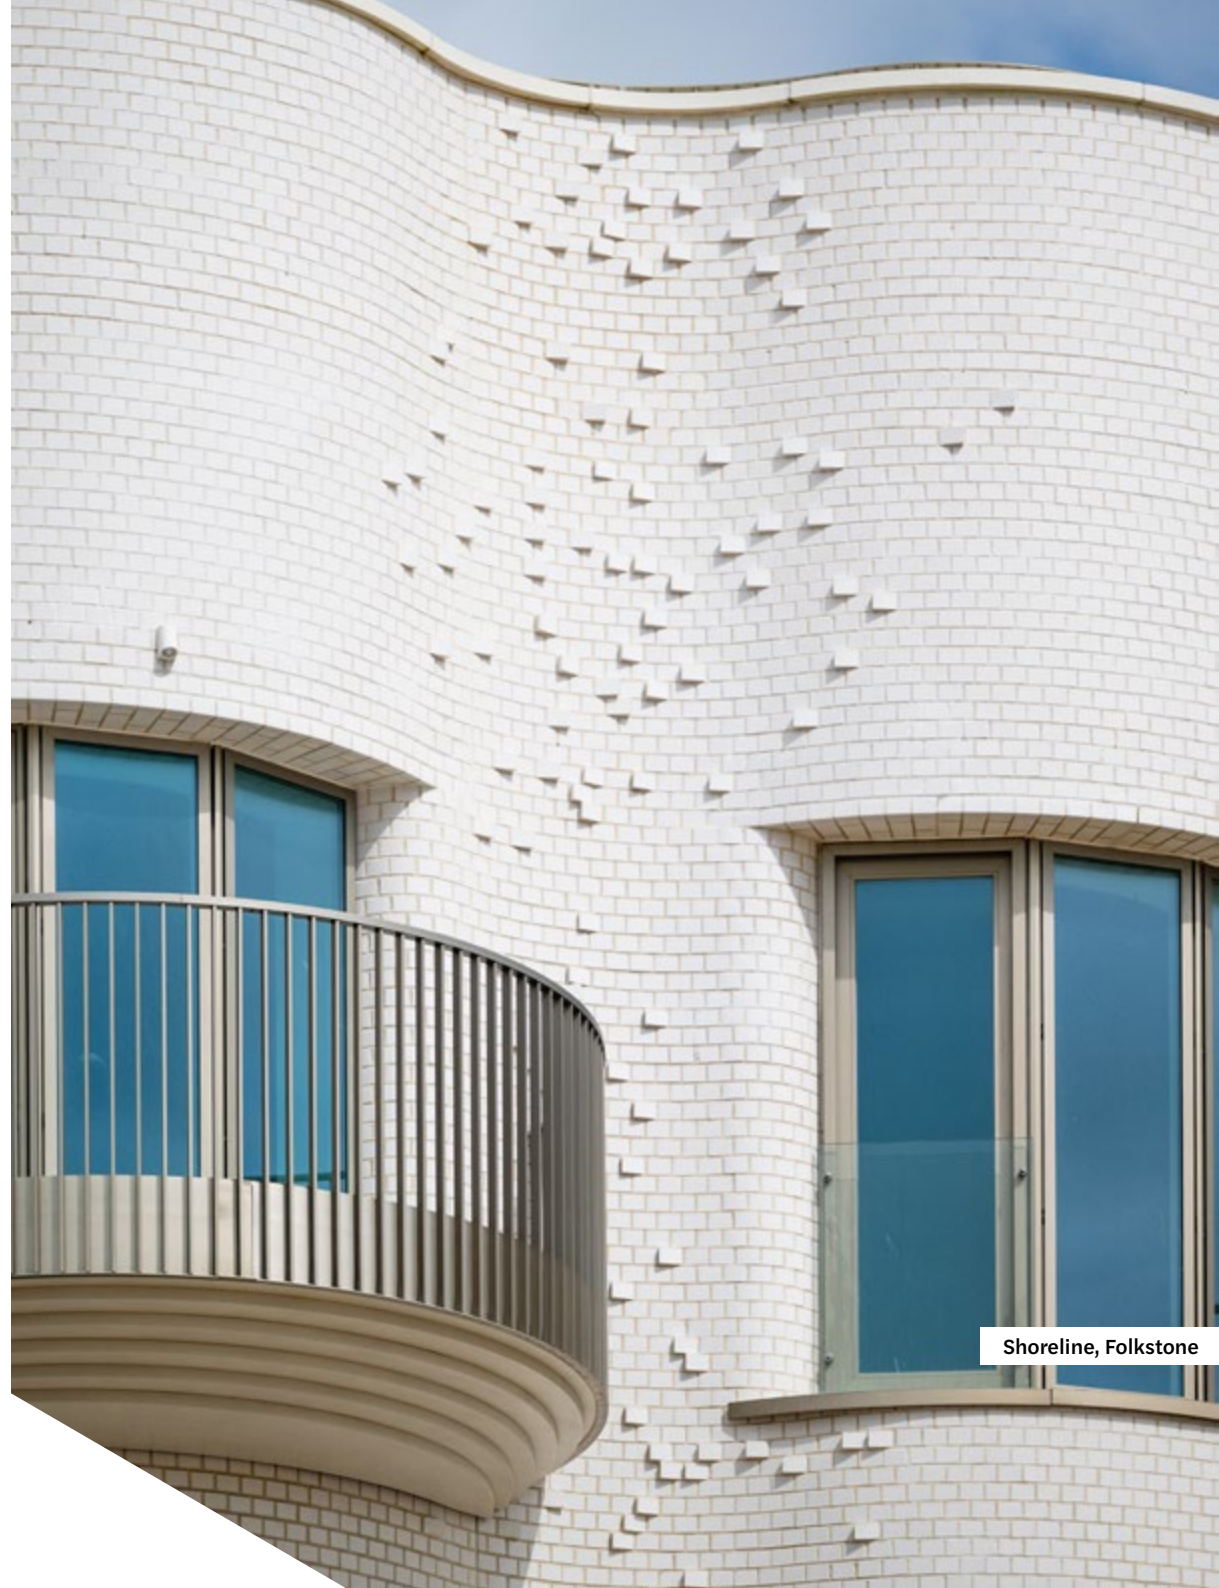

Due to the application of a veneer, which creates the bold glazed effect, these bricks also provide easy maintenance, making them great for high traffic locations or areas that experience adverse weather conditions.

Fade resistant, impervious to liquids and graffiti resistant, our glazed colours provide enhanced durability and visual appeal in a range of applications.

Our manufacturing partners are able to create glazes in almost any RAL colour and add distinctive textures including smooth, speckled and rough. Considering all these eye-catching effects, glazed bricks remain one of the most cost-effective ways of enhancing your brickwork facade.

Special Shaped Bricks

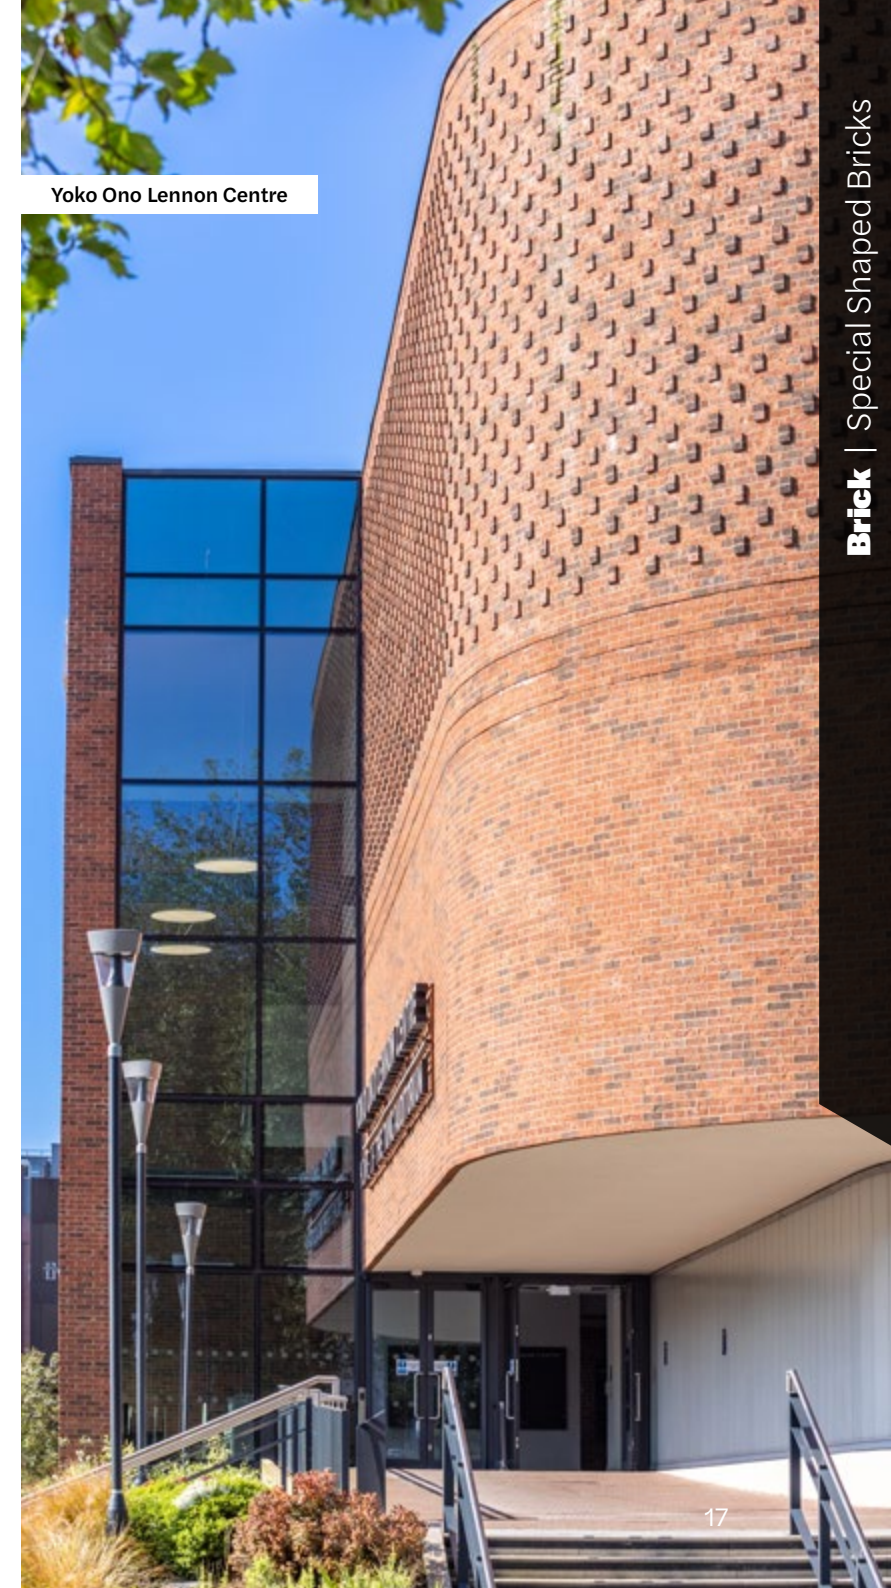

Thanks to our fabrication and manufacturing partners, we can offer a vast array of brick specials.

From bonding bricks and plinth bricks to brick slips and arch bricks, our range of standard and non-standard special shaped bricks are produced with exceptional quality and versatility in mind.

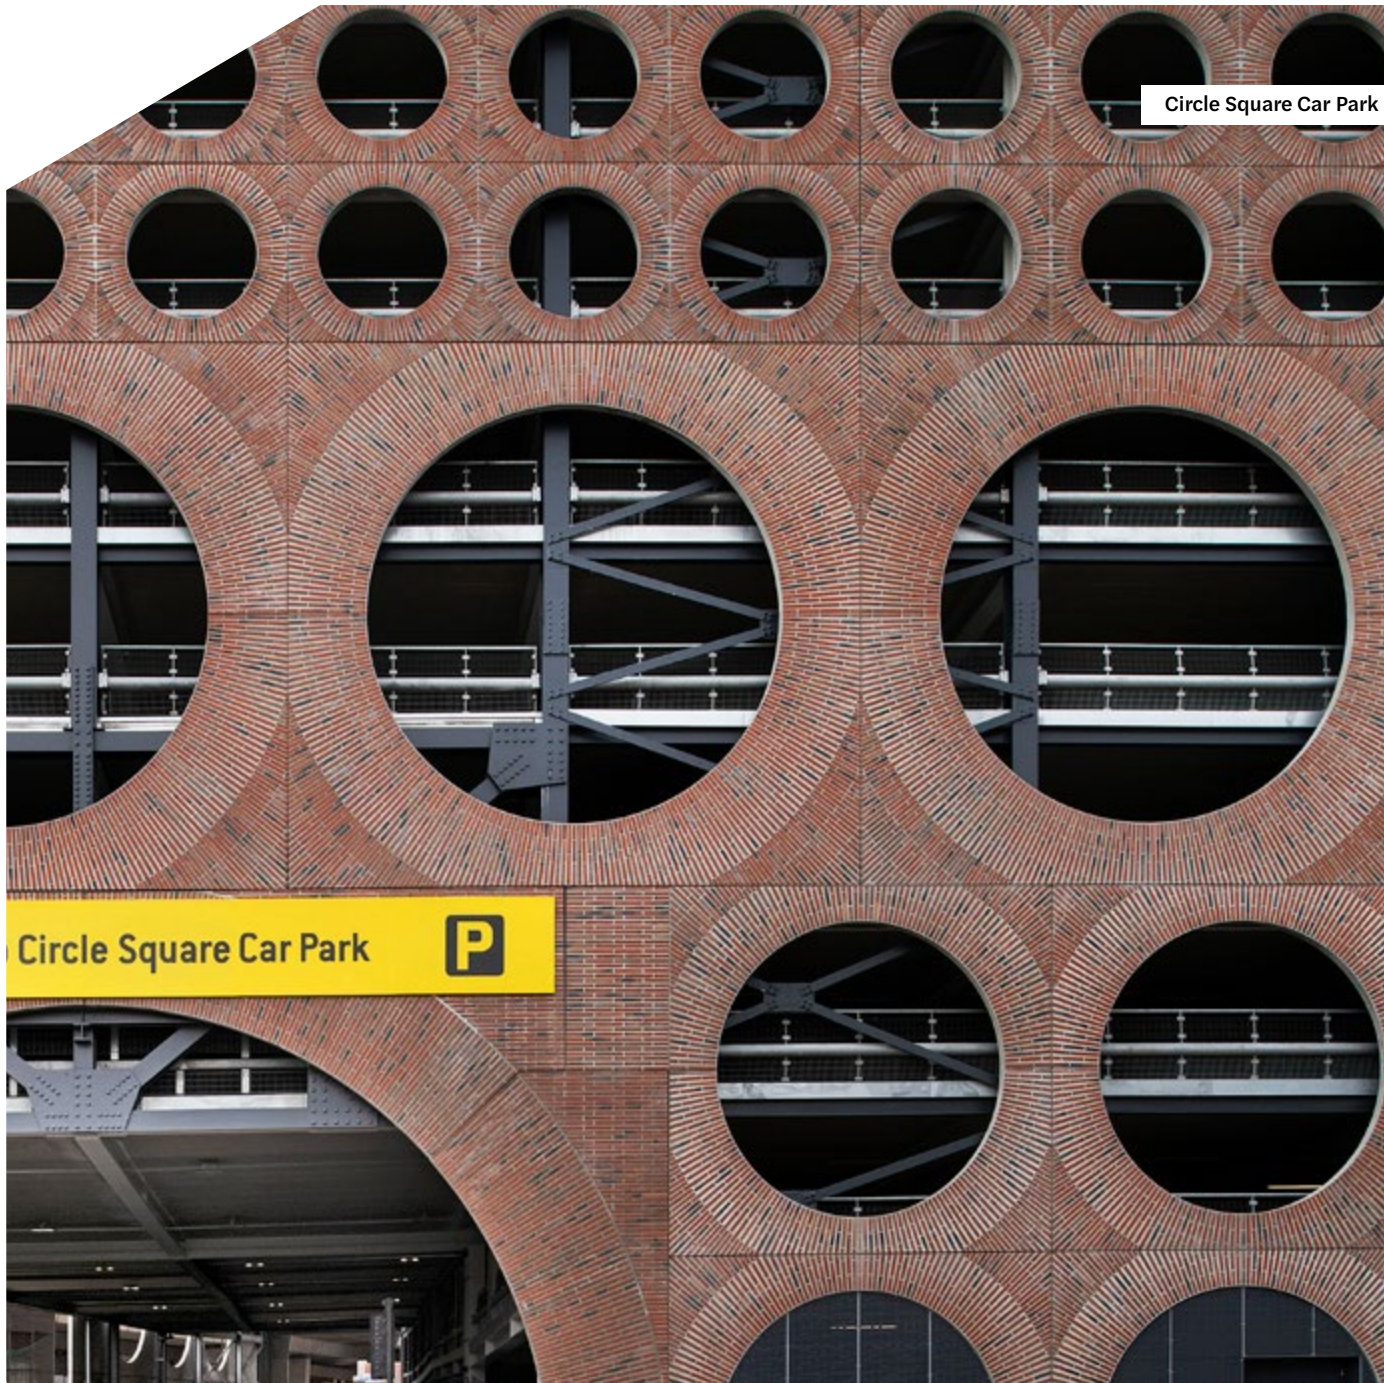

We use highly skilled teams with a wealth of experience to fabricate or reface bricks when purpose-manufactured bricks cannot be produced. Our teams can work directly with clients to create bricks to meet even the most ambitious design aspirations.

Prefabricated Brickwork

With over 35 years of experience and trusted fabrication partners, we help bring complex facade designs to life through high-quality prefabricated brickwork. From brick arches, chimneys, soffits and lintels to full prefabricated panels and brick slip systems, we offer a wide range of solutions to suit modern construction needs.

Manufactured in bespoke facilities using skilled techniques, our prefabricated components are easy to install, cost effective, and help accelerate build programmes by reducing time on site.

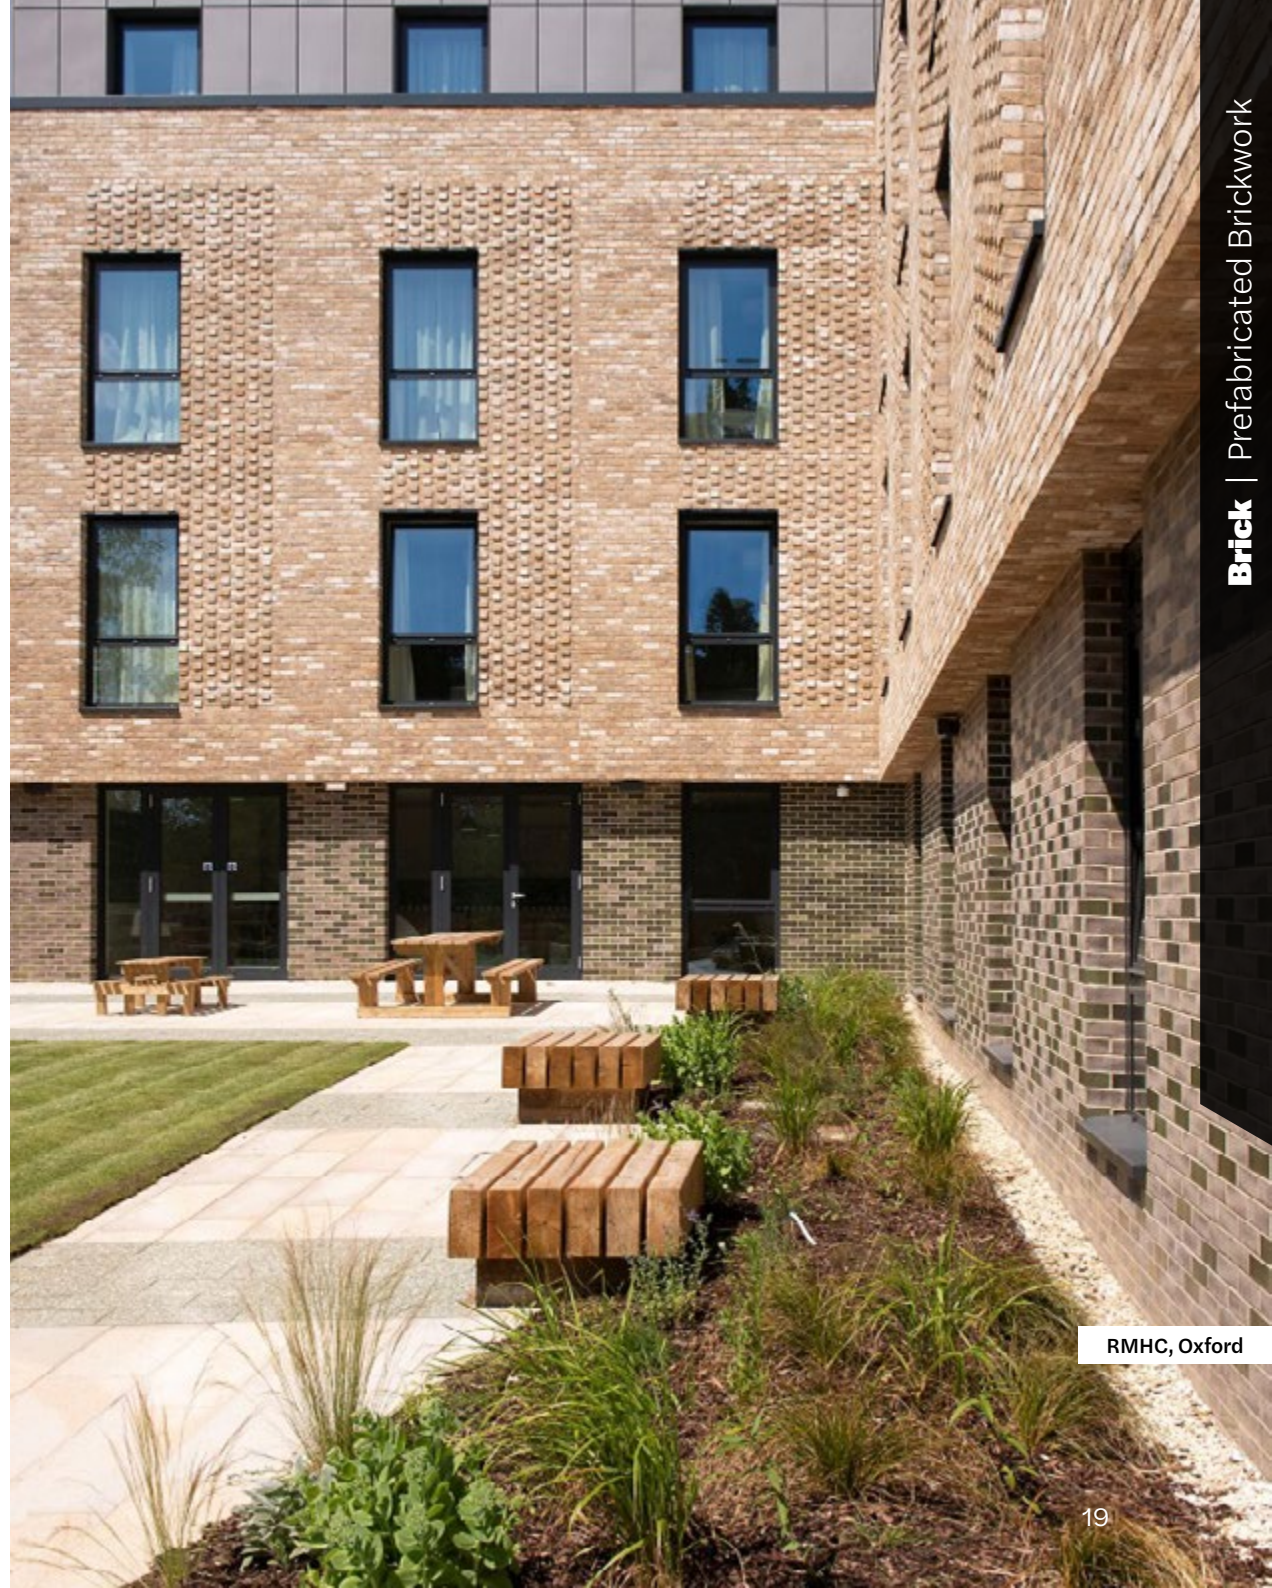

Whether your project requires a standard solution or something more bespoke, we support you from early design through to production and final delivery, ensuring precision and efficiency at every stage.

Other Brick Products

Discover our comprehensive range of specialist brick products, ready to meet the needs of a variety of projects.

Reclaimed Bricks

We supply genuine reclaimed bricks from trusted sources, perfect for blending new builds with traditional architecture. For a cost-effective alternative, our tumbled bricks replicate the look of aged brickwork and meet BS EN771-1 standards.

Concrete Bricks

In partnership with leading manufacturers, we provide high-quality concrete bricks in a range of colours and textures. Thanks to innovative production techniques, they can mimic the natural variation of clay bricks. We also offer concrete common bricks, selected for their strong technical performance.

Engineering Bricks

Designed for performance, our Class A and Class B engineering bricks offer strength and low water absorption for use in groundworks, retaining walls, and damp-proof courses. Available in red, blue, brown and black plus special shapes, we can also provide guidance on quantities.

Brick Cladding

Our brick slip cladding systems offer the visual appeal of traditional brickwork with faster installation and reduced weight. With a variety of finishes available, they're an ideal solution for both external and internal projects.

Yelverton Road

The image shows a modern, curved apartment building with a white brick facade. The building has multiple floors with large windows and balconies. The balconies have metal railings. The building is set against a blue sky with some clouds. The overall design is contemporary and unique.

Case Study

Shoreline, Folkestone

With panoramic views of the English Channel and a sparkling facade that mimics rippling waves, Shoreline in Folkestone is a showstopping development.

The scheme is the first part of a total regeneration of the Folkestone seafront and provides 84 new homes including 60 apartments, 20 townhouses and four duplexes, each with expansive sea views.

Brickability were initially contacted by local contractors Jenner (Contractors) Ltd, who asked them to find a durable brick that was low-maintenance and able to withstand the coastal elements. Discussions continued with the architects at ACME and the contractors until the Glazed White brick from our exclusive range was selected.

To help the project achieve its complex geometry and stunning finish, Brickability supplied over 630,000 Glazed White bricks in 24 different special shapes - each created to enhance the feeling of texture and movement within this unique facade.

Architectural Masonry

Architectural masonry offers a decorative and cost-effective alternative to structural concrete blocks or traditional natural stone. It's available in a range of attractive colours and finishes, with precise dimensions for a clean, consistent look.

Available Finishes:

Fairface

Providing a precise finish with minimal texture, these blocks are often used to create a uniform facade that is aesthetically pleasing.

Shot-blasted

The shot-blasted effect exposes the internal aggregates within architectural masonry blocks, providing a subtle yet interesting surface texture.

Polished

This high-quality finish provides a smooth and elegant appearance that can replicate materials such as marble or granite.

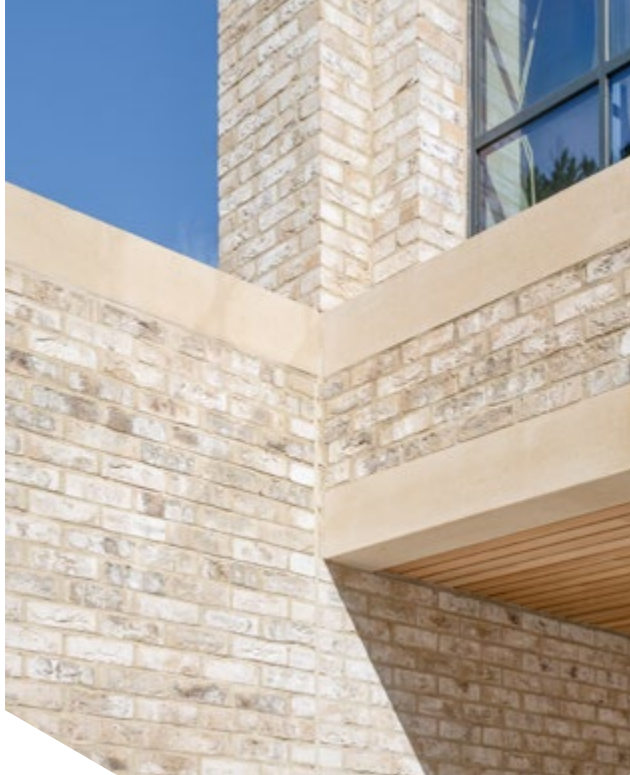

Explore our
Architectural Masonry range.

Click 

Split face

The closest replica to natural stone, split face blocks. A rustic but robust finish that easily blends into traditional stone surroundings.

All our architectural masonry products are available in a range of colours and come in both standard and special dimensions.

Cast Stone

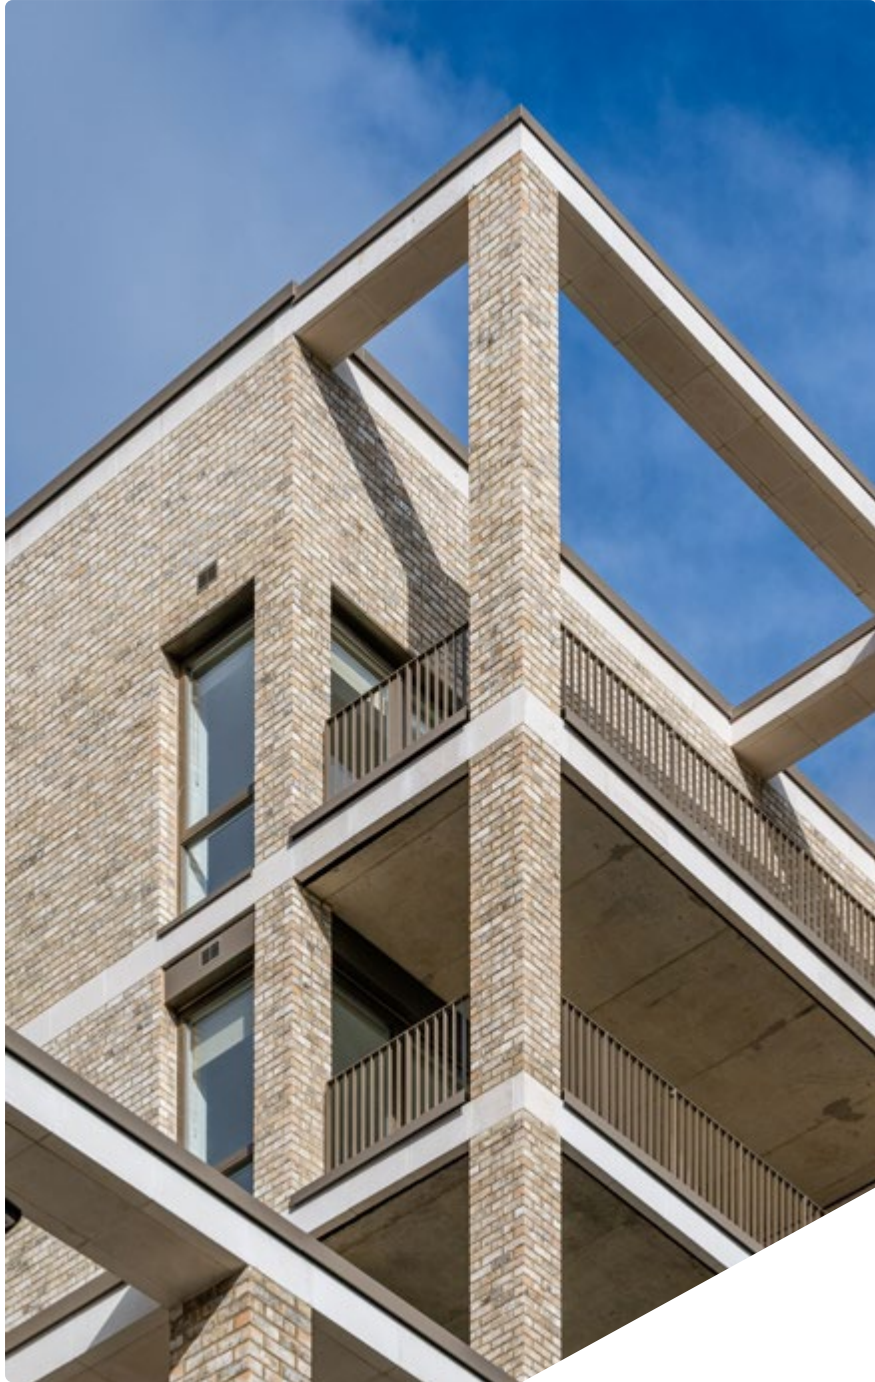

Designed to mimic the look of natural stone, cast stone is a timeless and attractive facade option that will stand the test of time.

Available as both semi-dry or wet cast stone, we can supply several bespoke and standard formats including cills, copings, window surrounds, plinths, string courses and quoins.

Reflecting stone from across the UK, our available colours include:

- Bathstone
- Portland Stone
- Mendip Grey
- Slate Grey
- Cotswold Stone
- Yorkstone
- Forest Green
- Shaldon Red

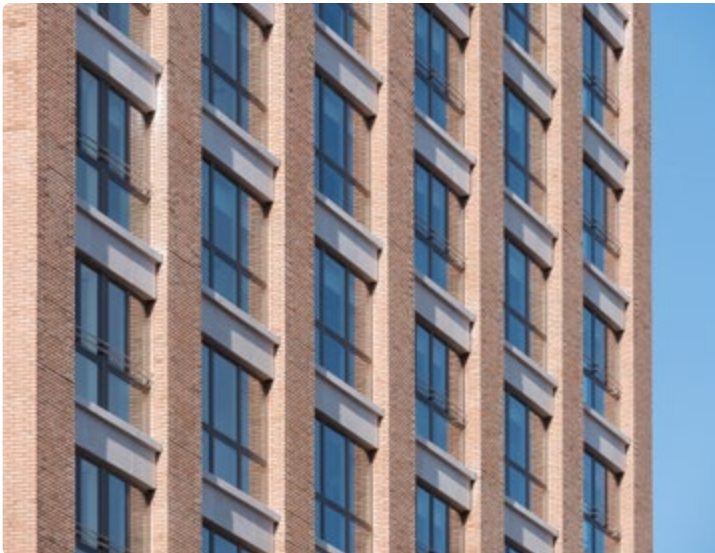

GRC

An alternative to cast stone, GRC (glass reinforced concrete) is imbued with glass fibres to create a strong yet lightweight product.

GRC is typically employed in technically challenging circumstances where using traditional cast stone may not be possible due to weight restrictions. This could be as thin cladding panels, overhanging soffits or for string courses.

GRC holds a BREEAM A+ material rating for low environmental impact.

Find **GRC** inspiration.

Click

Natural Stone

Natural stone is valued for its traditional beauty and versatility, making it as popular today as it has always been.

By working closely with our stone suppliers from across the UK, we can source stone to fit your exact aesthetic or planning requirements. From dark to light tones, our offering includes Sandstone, Limestone, Granite, Yorkstone, Quartzite, Basalt, Marble, Slate, Pennant and Travertine.

These naturally occurring tones are present throughout the stone with no colour fade or changes over time.

Additionally, our natural stone blocks can be delivered in a range of finishes to meet your project needs:

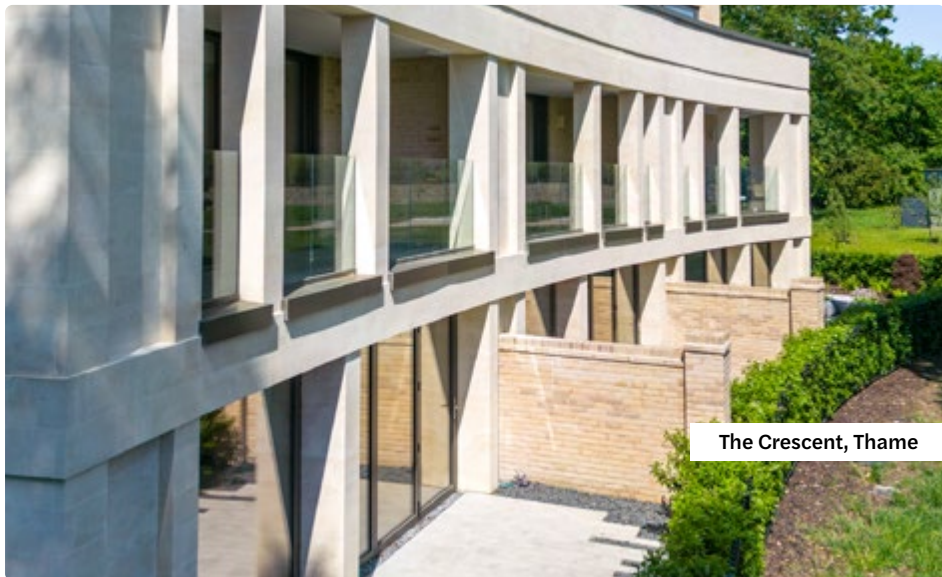

- Smooth
- Split faced
- Pitched
- Machine sawn

Walling Stone

Natural stone walling is a durable, naturally occurring option that embodies the character and grandeur of traditional UK architecture. It is recommended for its durability, stability and beautiful colouring.

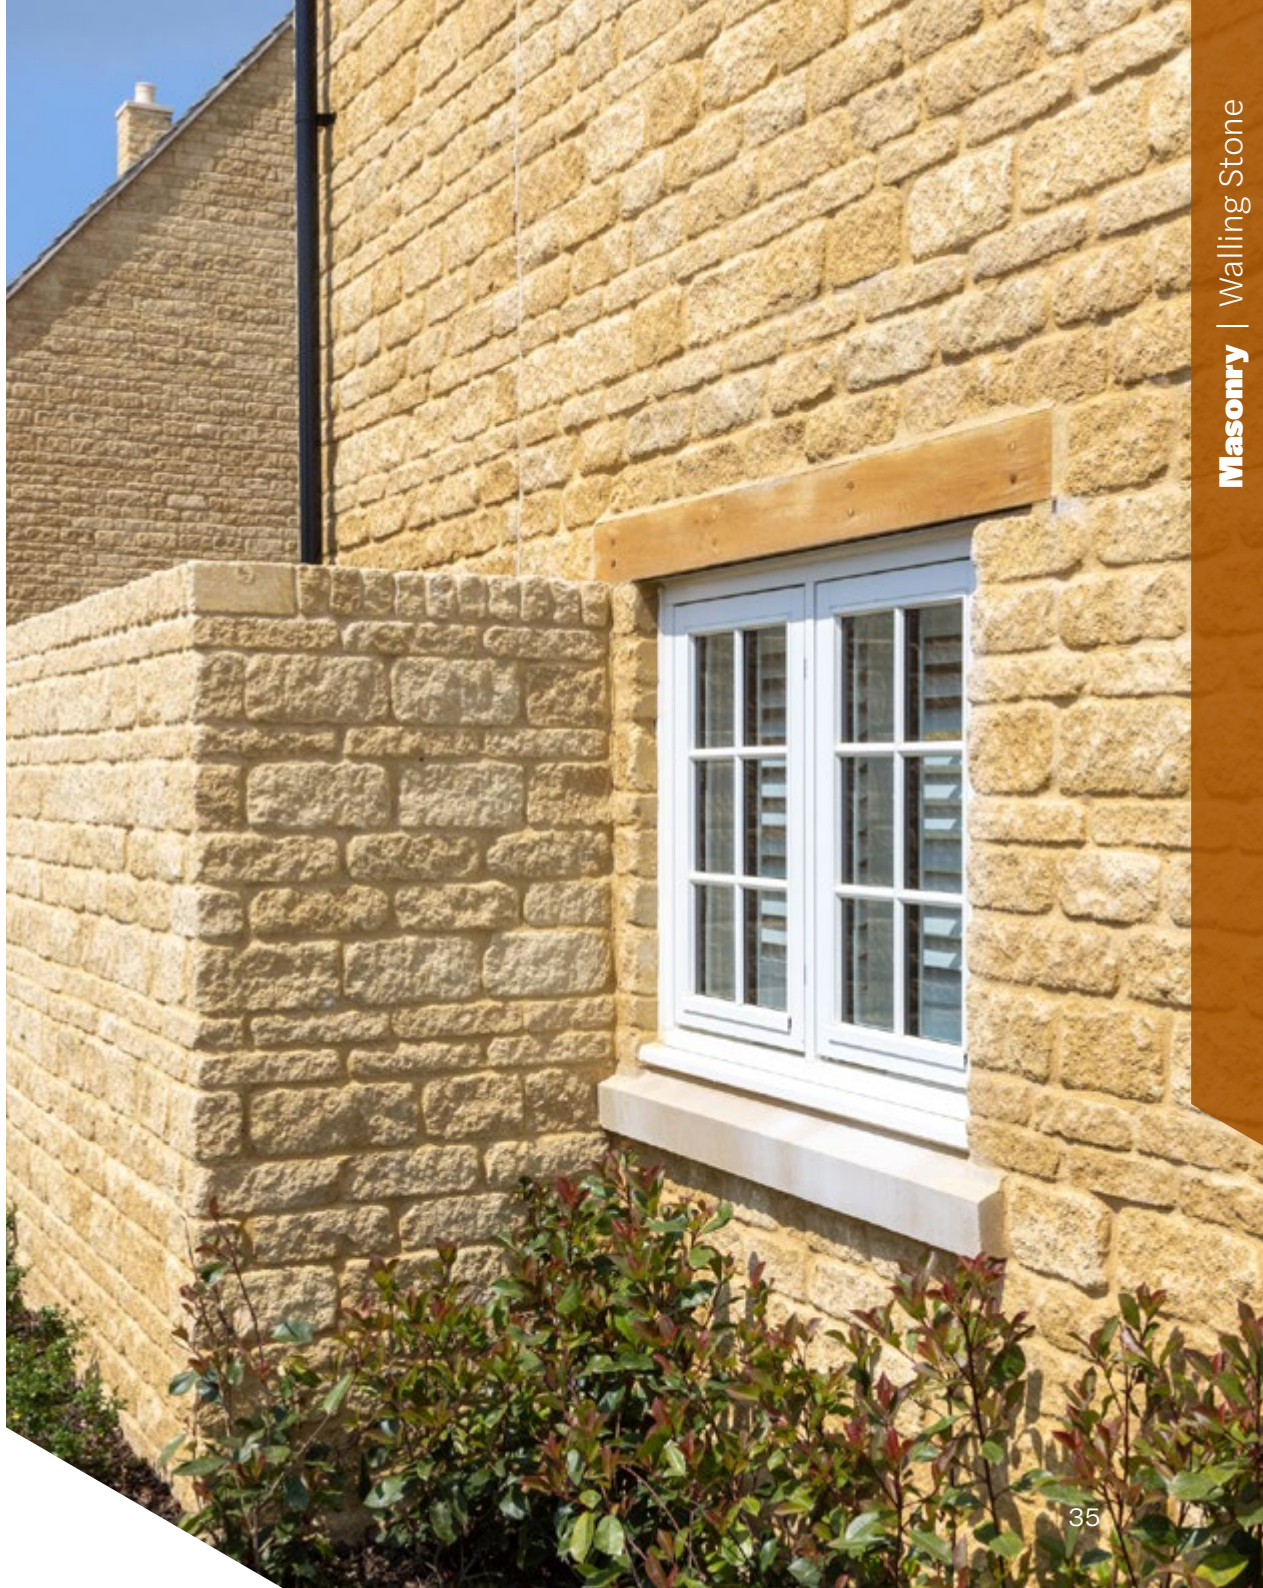

Sourced from a selection of established quarries, we can supply a wide range of walling stone types to match any local vernacular. Alternately, our reconstituted walling stone is manufactured with natural tones in mind to create a similar effect.

If you need to be sensitive to local building methods and materials but you're finding it hard to source suitable supplies, we are positive we will be able to find you a stone solution that will fit in perfectly with the demands of your development.

Case Study

Spinners Grange

At the entrance of Blockley village in Gloucestershire lies Spinners Grange, an attractive development that combines contemporary living with traditional country architecture. Developed by Cameron Homes and designed by Tyak architects, the 23 homes have all been constructed using traditional materials and production techniques.

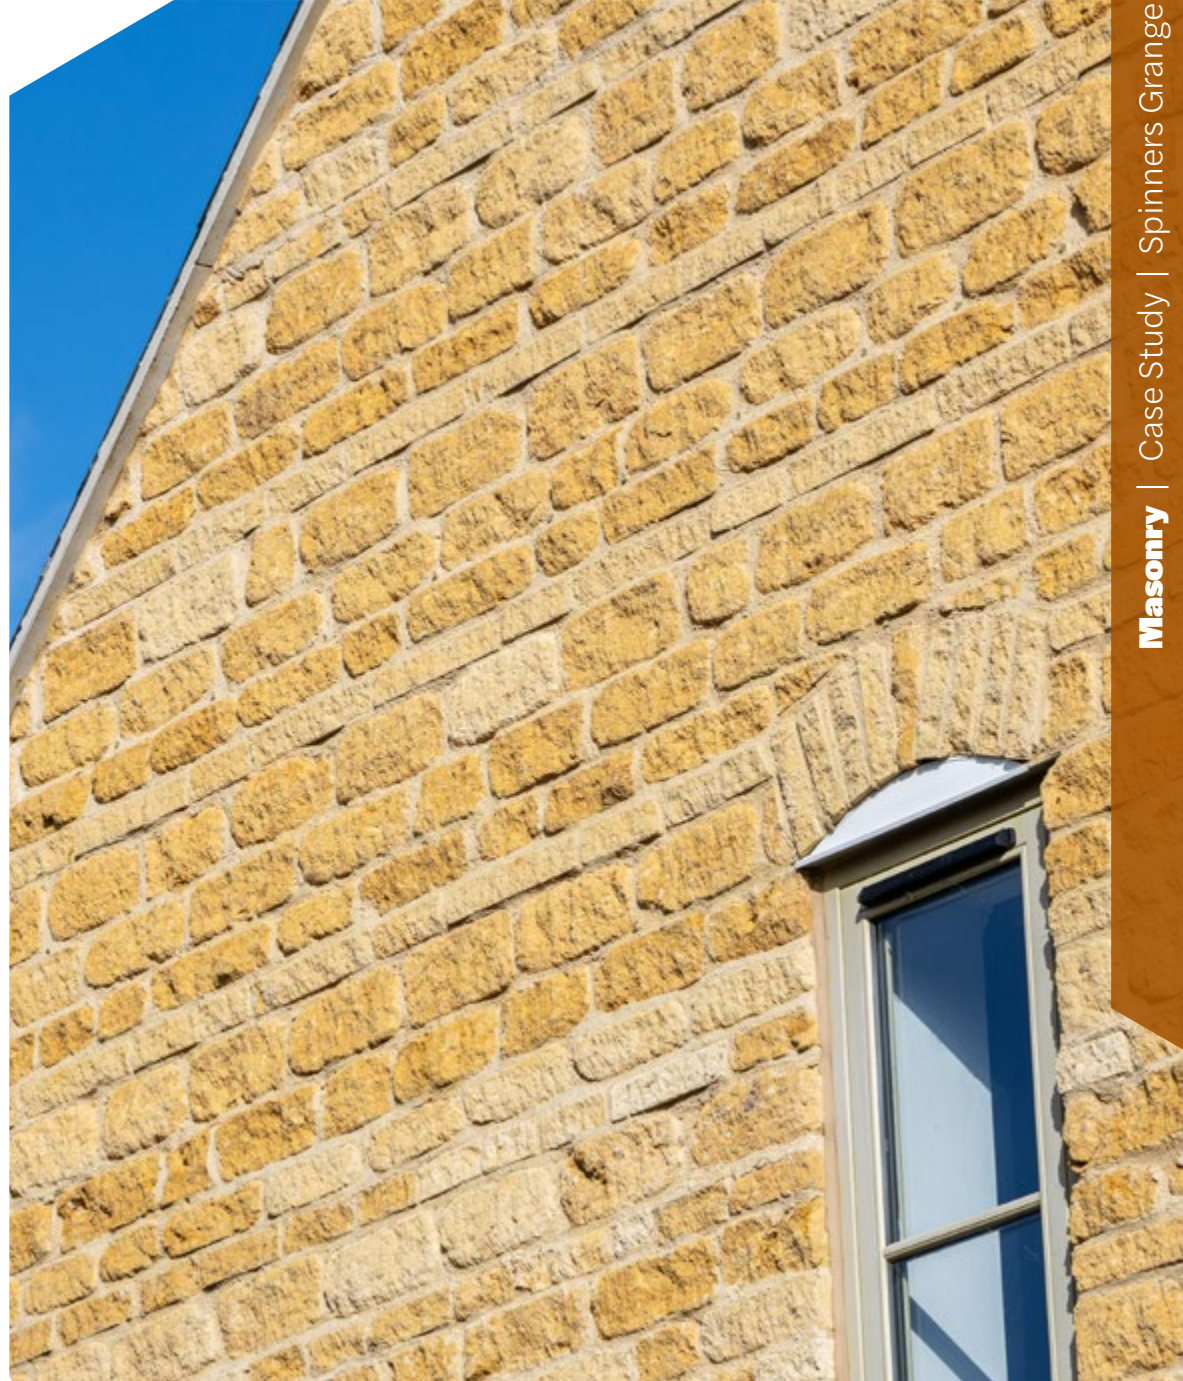

A stroll through the village of Blockley reveals an abundance of buff-coloured Cotswold limestone stonework, therefore natural, local stone was an obvious choice for the Spinners Grange development.

Sawn, split and tumbled building stone was selected for each of the properties, accompanied by decorative stone dressings including quoins and corbels. Natural stone was also chosen for the heads and cills, providing a textural difference to the facade, while maintaining consistency with buildings in the local area.

The team at Brickability worked closely with the architects and the client to provide the range of natural stone products to the project, always considering the use of local materials and trades.

Brick Cladding

An A1 fire-rated brick cladding solution, **Sustainabrick®** allows customers to personalise their brick slip finish to any project requirement. Thinner and lighter than alternate brick cladding systems, **Sustainabrick®** also uses carbon neutral brick slips.

Cast into custom moulds and dried at ambient temperatures, the slips are then dressed to achieve your desired aesthetic. Due to this method, our brick slips all perform the same way, no matter their colour, texture or size.

Insulation, weatherproofing and the aesthetic facade are all included within the **Sustainabrick®** wall build-up, creating an EWI system that doesn't require a cavity tray or fire barrier.

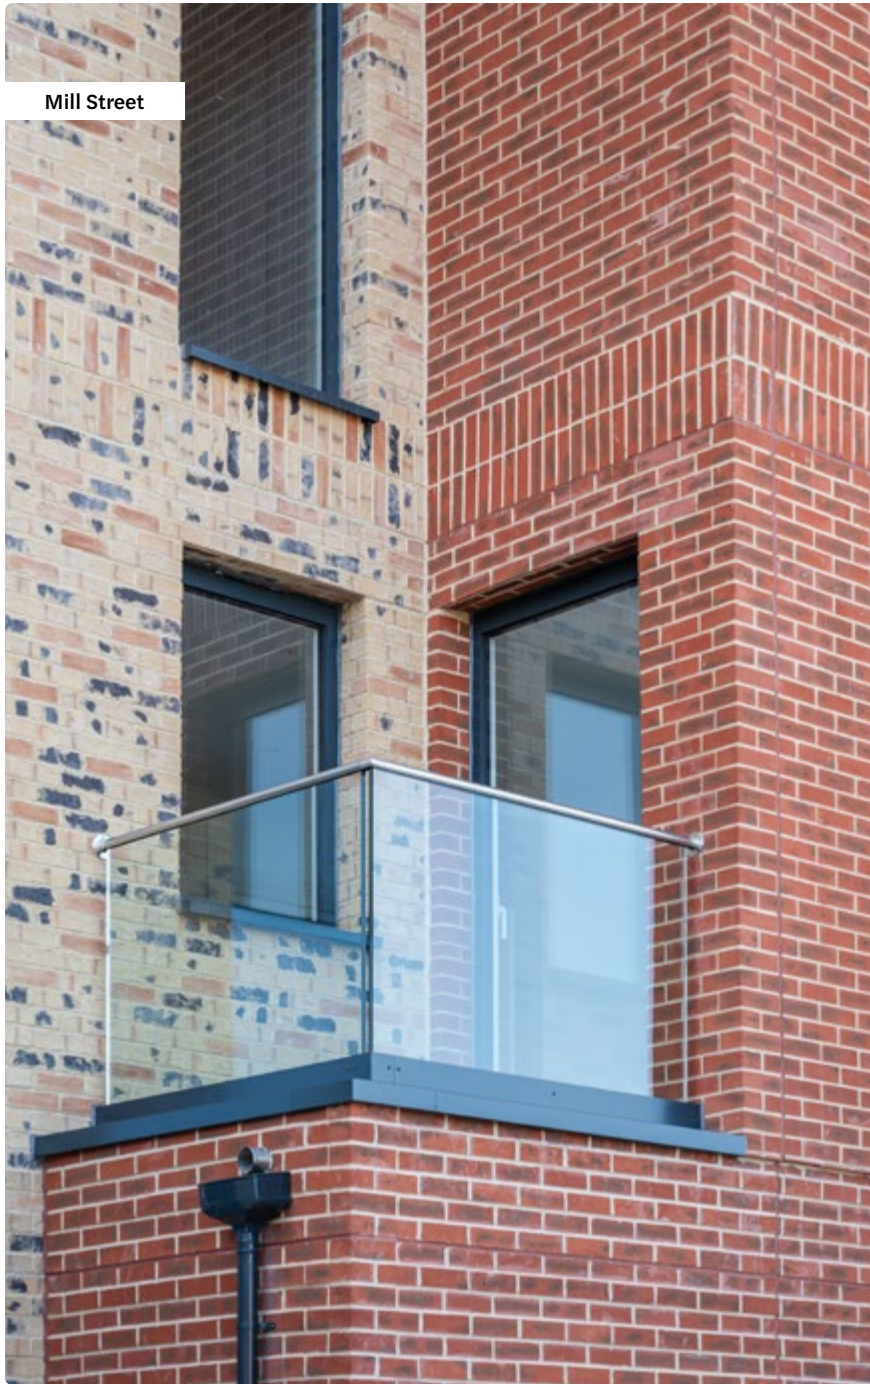

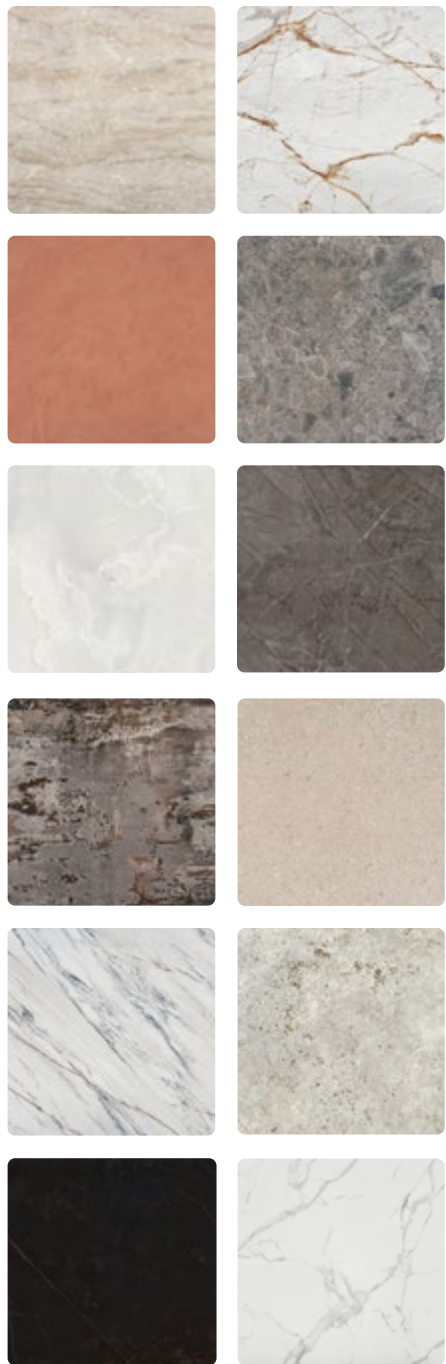

Yelverton road

Find more benefits of
Sustainabrick® Brick Cladding.

Click

Ceramic Cladding

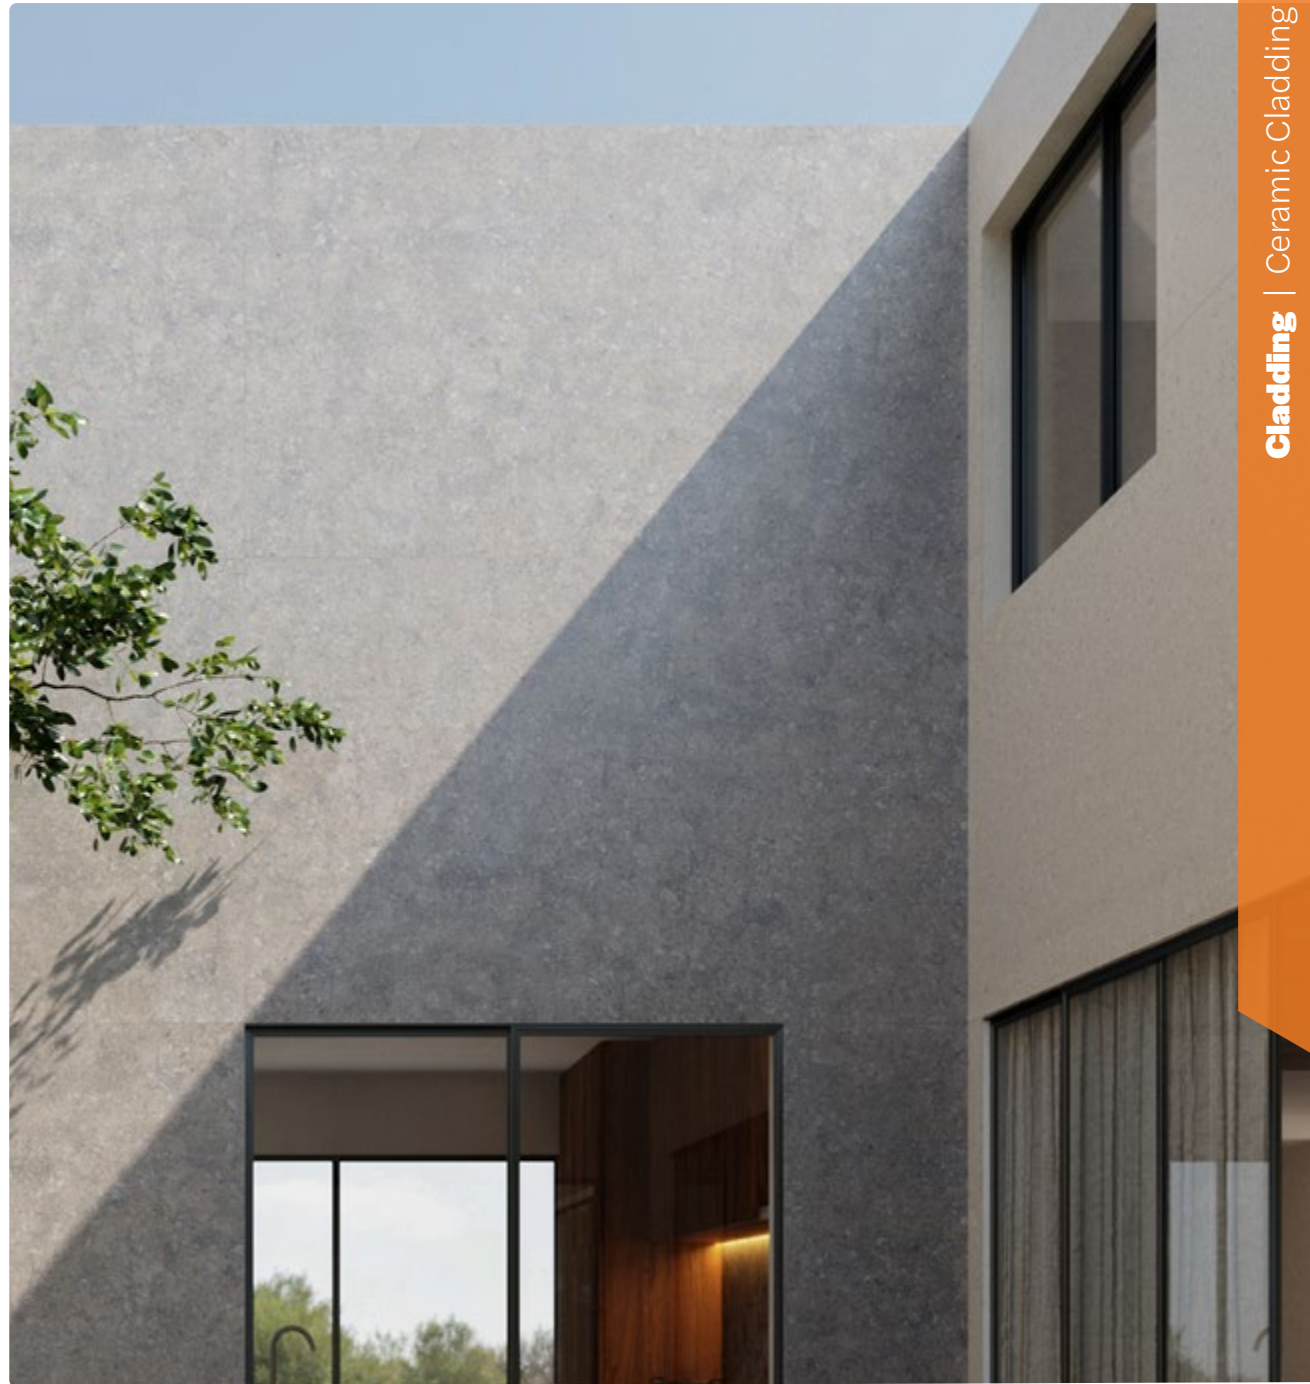

Recommended for its versatility, ceramic cladding provides the specifier with a choice of textures and colours whilst being able to select from matt to highly reflective, polished and glass finishes.

Our ceramic cladding range includes metal, natural stone, concrete and slate-effect finishes, plus the option to create completely bespoke patterns and designs. Once designed, our ceramic cladding can be produced in a variety of sizes and thicknesses, including panels as thin as 3mm and as large as 3m.

To complete your facades, we then have a range of fixing solutions for secret fix and colour coded face fix.

Explore our
Ceramic Cladding options.

Click

Composite Cladding

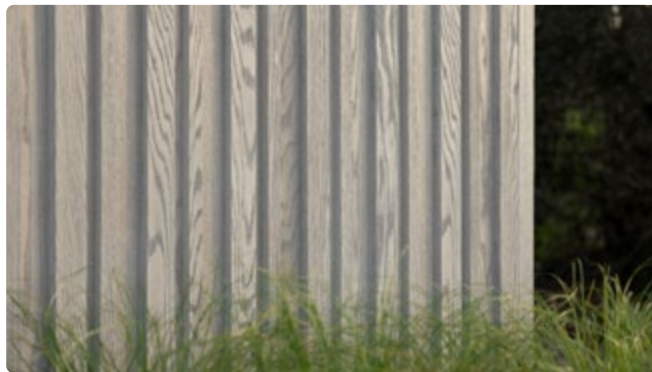

If you're looking for a realistic, lower-maintenance alternative to wood for your cladding, this is one of the best solutions on the market. **Millboard** composite cladding is moulded from real oak, capturing its grain and tone so convincingly that it's hard to tell it isn't wood. One of **Millboard's** key benefits is that, due to its fibreglass-reinforced, resin-mineral composition, it won't rot, warp, split, fade or be susceptible to algae growth.

Choose from two profile ranges: the deep-relief Board & Batten+ for rustic texture or the sleek Shadow Line+ for crisp contemporary lines. Matching corner profiles, reveal boards, trims and fixings create a seamless finish, and we supply free samples, literature, take-offs and technical advice to help you specify with confidence.

Composite Cladding

Click 

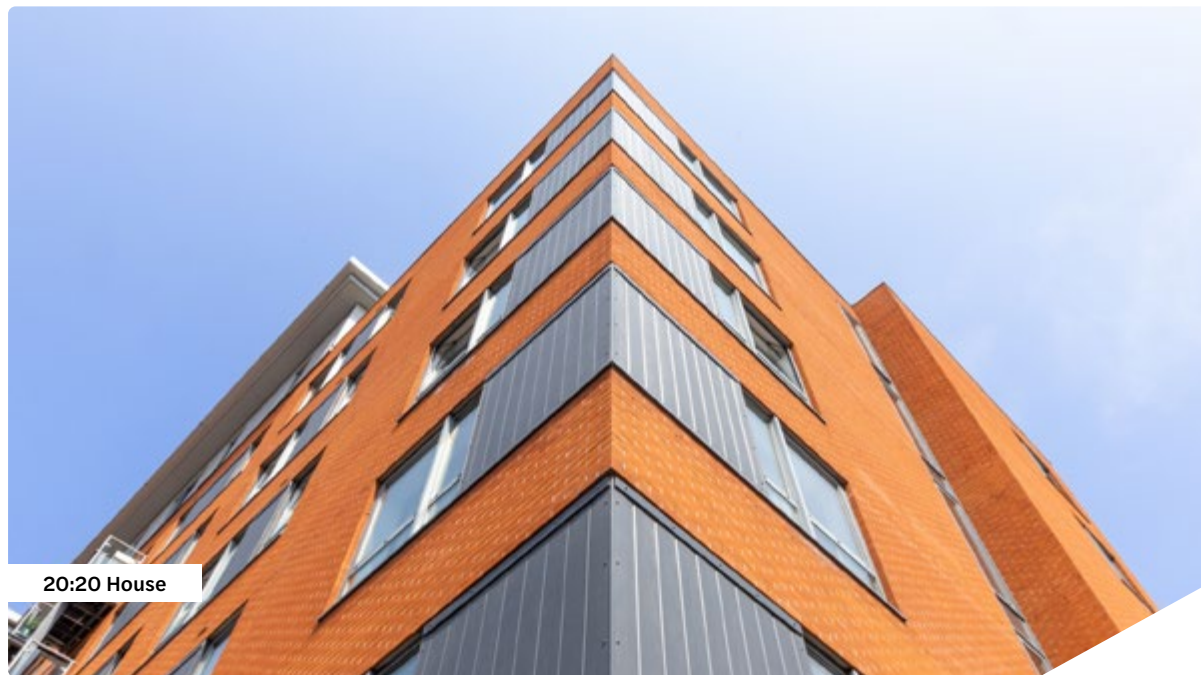

Fibre Cement Cladding — James Hardie

The James Hardie range, which includes **Hardie® Plank** and **Hardie® Panel**, offers durable, low-maintenance cladding solutions for everything from home renovations to large-scale commercial projects. Made from a mix of cellulose fibres, cement, water and sands, these boards are lightweight and easy to install.

Replicating the look of natural timber, **Hardie® Plank** provides a hard-wearing and cost-effective alternative. Choose **Hardie® Plank** for a more rustic look or opt for **Hardie® VL Plank** if you're aiming for a sleeker finish.

Many of our depots are Premium Stockists, enabling fast access to all 21 colours of board.

Find out more about
Hardie® Plank.

Click 

For a smooth, modern facade, Hardie® Panel is ideal. If texture is preferred, **Hardie® Architectural Panel** is available in Smooth Sand and Brushed Concrete finishes.

There are 6 standard colours available in both ranges, each of which are supported by ColourPlus™ Technology. If you're in need of a bespoke colour option, **Hardie® Panel** can be manufactured to almost any standard RAL colour.

Find out more about
Hardie® Panel.

Click 

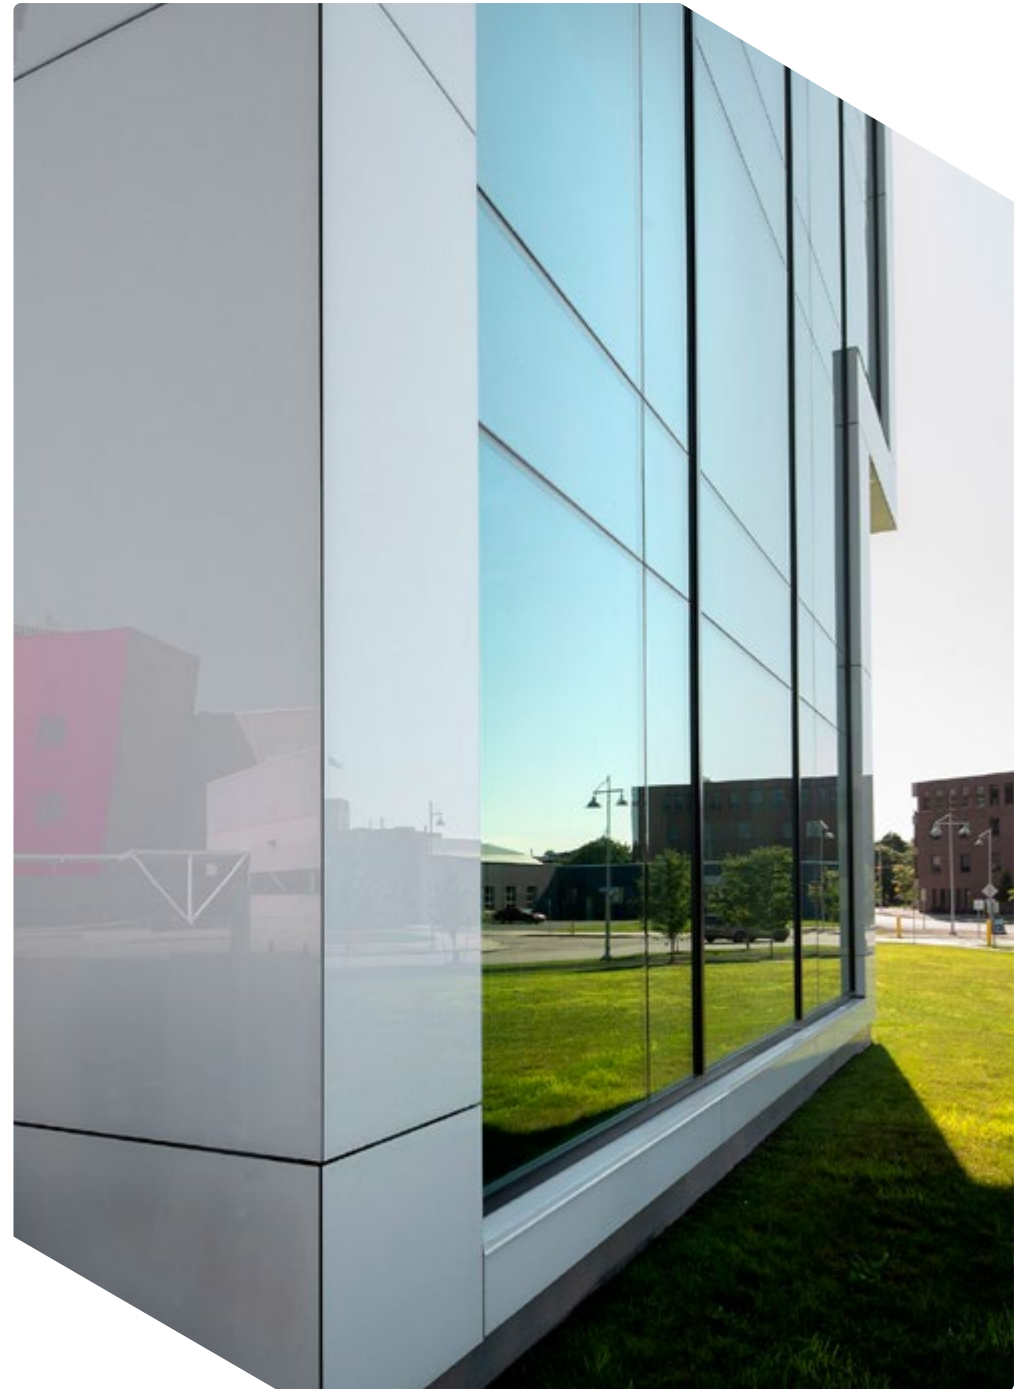

Glass Cladding

Glass rainscreen systems offer projects a beautiful and timeless finish, whilst their lightweight nature makes them suitable for a wide range of applications. While glass panel sizes can reach up to 4.2m x 1.5m, they can weigh as little as 20kg per m².

Our glass cladding, manufactured by GammaStone, has been fire tested in accordance with BS 8414-1:2015 + A1:2017 and impact tested to EN 13049:2004.

Glass cladding is available in a range of 19 standard colours, plus all other RAL colours or bespoke surface printing upon request.

Find **Glass Cladding**
inspiration.

Click 

GRC Cladding

The truly versatile nature of glass reinforced concrete means that our cladding panels offer high performance with an endless range of bespoke structures, finishes and colours.

Available as a rainscreen, unitised facade or curtain walling, we can also produce detailed corner panels, curved elements and monolithic architectural structures.

The GRC material is also backed by an A1 Fire rating, is EPD verified and is 95% recyclable at the end of its lifespan.

Metal Cladding

With a vast range of metals and finishes available, an almost endless variety of facades can be produced using our **Armourclad** metal cladding.

Armourclad comes in both A1 or A2 fire rated finishes and can be extruded or folded into any shape to create beautiful and truly bespoke designs.

To fix our metal cladding to your facade, we have a full range of visible and secret fixing solutions to use including:

- AF-Armourclad-IF – a secret fix panel with incorporated insulation
- AF-Armourclad-SSP – a secret fix standing seam panel
- AF-Armourclad-ILP – a versatile interlocking secret fix panel
- AF-Armourclad-HP – a secret fix hook panel
- AF-Armourclad-GP – a secret fix for geometric panels
- AF-Armourclad-BP – a completely bespoke panel based on your design

Our **Armourclad** mesh cladding offers a striking rainscreen solution to complete or complement your project facade. Providing a multidimensional surface, we offer both expanded mesh and perforated metal panels.

Old Marylebone Road

Stone Cladding

A natural stone rainscreen offers a timeless aesthetic with the additional benefits of a ventilated cladding solution. With panels as thin as 20mm, our systems use less material than traditional stone blocks, making them a lightweight and sustainable choice.

We have a range of stone types available, including sandstone, limestone, granite and slate. Then, each stone is available in a range of textures, including honed, flamed, sandblasted, tooled and polished.

Find out more about our **Stone Cladding** options. **Click** 

The **TIER® ULTRA** natural stone panels make it easy to achieve the character of a traditional masonry wall quickly and without the need for specialist labour.

Available as full panels, half panels and 'L' shaped corners, the stone-fronted cladding interlocks seamlessly for a flawless finish without the need for mortar. **TIER® ULTRA** can be installed both internally and externally and has been designed to be long-lasting and resistant to moisture, UV rays and temperature fluctuations.

We offer **TIER® ULTRA** in five beautiful shades - Rustic Granite, Black Slate, Multicolour, Nordic or Quartz.

Terracotta Cladding

Fast becoming one of the UK's most popular facade systems, terracotta cladding is known for its strong performance credentials and great design flexibility.

Our two terracotta cladding systems, Soladrilho Terracotta Cladding and CN Terracotta Cladding, offer customers a wide range of tile profiles, colours and finishes. From bespoke glazes through to custom profile shapes, we can create truly unique facade solutions.

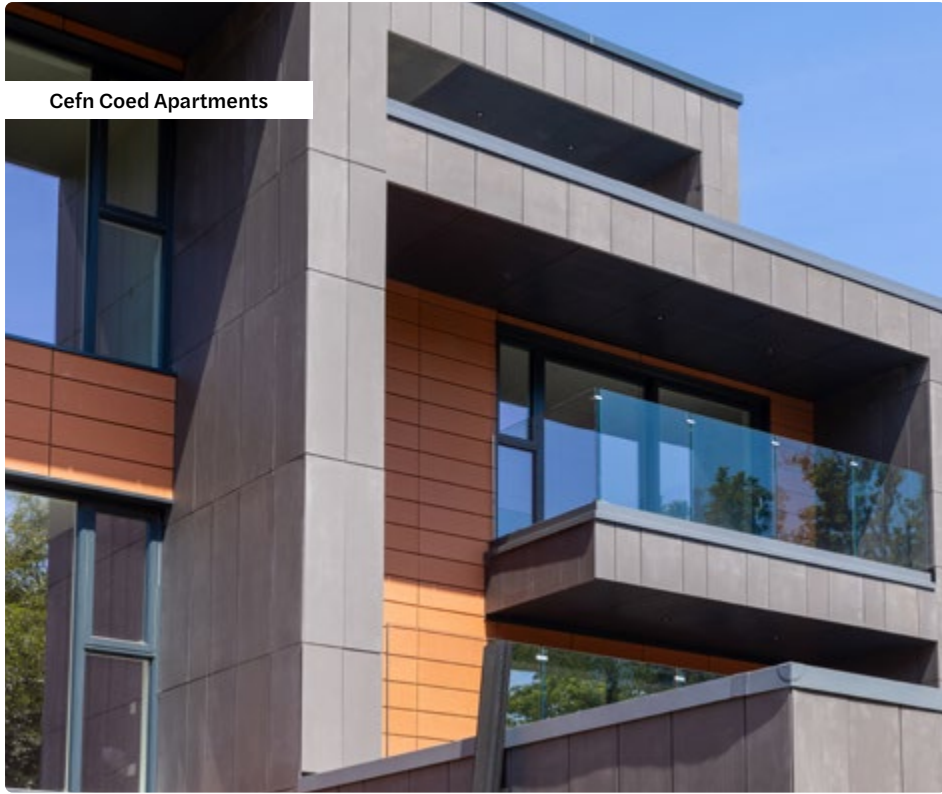

Terracotta is also a sustainable facade choice as the terracotta tile is made from naturally occurring clay which is fully recyclable at the end of its life cycle.

Case Study

Limelight

Less than a 15-minute walk from Liverpool's city centre, Limelight offers premium accommodation to students attending the University of Liverpool.

Architectural Facades worked closely with Falconer Chester Hall architects and the main contractor BLCP (Blacklight) to design and supply bespoke products including Armourclad metal cladding and Armourclad expanded mesh, plus the brackets and support structures.

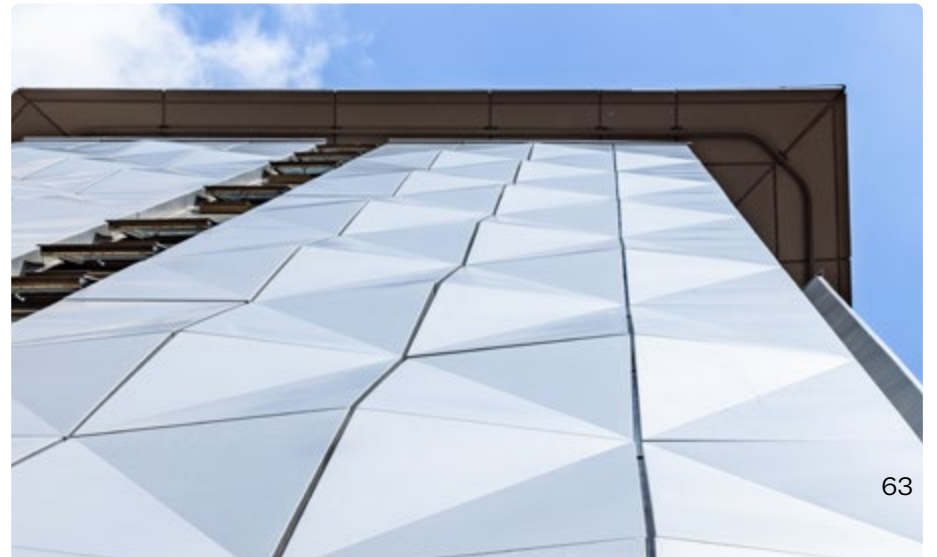

On this project, the metal cladding was supplied in custom silver geometric panels while the mesh cladding was specified in a powder coated champagne colour and installed at alternating windows, creating a chequerboard effect.

The versatility and aesthetic appeal of Armourclad made it the ideal choice for this project that aimed to deliver visual impact as well as practical student living.

Balcony Systems

Brickability's balcony systems focuses its cutting-edge, precision engineering on removing problems once associated with balcony design including drainage, water penetration, water stagnation and environmental impact.

From bespoke, small-scale projects to high-rise developments, we can serve a wide range of customers. Each balcony is assembled off-site to minimise on-site labour and disruption.

66 Skyline Balcony Systems

Skyline Balcony Systems

Skyline Balcony Systems are made from lightweight structural aluminium that is 100% recyclable, making them a more sustainable option when compared to traditional steel balconies.

Every balcony is fully certified, comprehensively tested and precision-engineered with all components designed for tight tolerances, increased accuracy and ease of assembly.

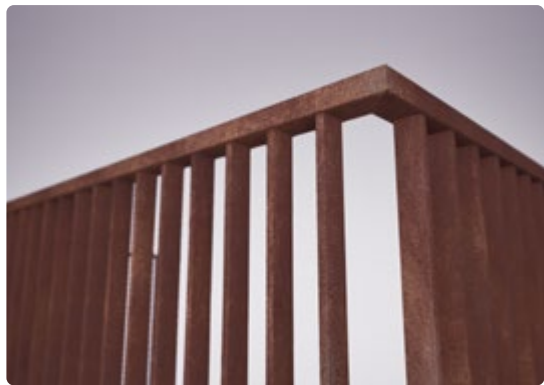

Sizes are fully customisable, and every balcony will be made bespoke to your project. We offer high quality polyester powder coating (PPC) in the full RAL colour range. We can also provide anodised and anodic-look finishes that can be adapted to suit your project.

Services

How can we help?

To support architects, developers, contractors and installers, we offer a number of useful services alongside our wide range of products.

Brick & Masonry Matching

Your brick search ends here. We provide a free matching service that utilises the expertise of our teams to help you find either the exact brick used within an existing structure or provide the nearest match.

Our brick specialists have years of industry experience and have supported countless architects, builders and private customers to find a brick match.

Since we are based across the UK, our teams also have local knowledge of commonly used bricks and stones from construction projects in their area. Customers can either send photos directly to us or, for larger projects, we can organise for a member of the team to visit the site to recommend a match and provide samples.

Submit **Brick Matching**
Request **here.**

Click 

Design & Specification

For design and specification support, our teams utilise their years of experience to assist our customers in specifying the right materials for their projects. Through design consultants, showroom appointments and site visits, we can discuss your requirements and recommend our products most suited to your needs.

Sample Service

Physical samples provide customers with confidence when specifying.

If you need to see our products in person but can't get to one of our showrooms, we can send product samples direct to you.
